3 Safety Instruction

Please read the following safety notices before installing or using this unit. They are crucial for the safe and reliable operation of the device.

- Please use the product-specified power adapter. If you need to use a power adapter provided by another manufacturer due to special circumstances, please confirm that the voltage and current of the provided adapter meet the specifications of this product, and it is recommended to use a product that has passed safety certification, otherwise it may cause fire or electric shock accidents. When using this product, do not damage the power cord, do not twist, stretch and strap it, and do not press it under heavy objects or sandwich between items, otherwise it may cause fire or electric shock caused by broken power cord.
- Before using the external power supply in the package, please check the home power voltage. Inaccurate power voltage may cause fire and damage.
- Please do not damage the power cord. If power cord or plug is impaired, do not use it because it may cause fire or electric shock.
- Do not drop, knock or shake the phone. Rough handling can break internal circuit boards.
- Before using the product, please confirm that the temperature and humidity of the environment meet the working requirements of the product.
- Avoid wetting the unit with any liquid.
- Do not attempt to open it. Non-expert handling of the device could damage it. Consult your authorized dealer for help, or else it may cause fire, electric shock and breakdown.
- Do not use harsh chemicals, cleaning solvents, or strong detergents to clean it. Wipe it with a soft cloth that has been slightly dampened in a mild soap and water solution.
- When lightning, do not touch power plug, it may cause an electric shock.
- Do not install this phone in an ill-ventilated place. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

4 Overview

Y501/Y501-Y/Y501W/Y501W-Y is a SIP mini medical bedside intercom product developed specifically for the needs of users in the medical and nursing industry, with a compact and stylish appearance and powerful functions, supporting the use with wireless keys for emergency dialing and playing music operation. Intelligent security, audio/video intercom and broadcasting functions in one, cost-effective. Support 86 box embedded installation, protection level to meet IP54 standard, can effectively dustproof and splash-proof, suitable for indoor scenes, can provide users with quality communication intercom services.

Y501-Y/Y501W-Y comes with medical handle, multiple buttons, support call, hang up, one key emergency call, more convenient.

5 Install Guide

5.1 Use POE or External Power Adapter

Y501/Y501-Y/Y501W/Y501W-Y, called as 'the device' hereafter, supports two power supply modes, power supply from external power adapter or over Ethernet (POE) complied switch.

POE power supply saves the space and cost of providing the device additional power outlet. With a POE switch, the device can be powered through a single Ethernet cable which is also used for data transmission. By attaching UPS system to POE switch, the device can keep working at power outage just like traditional PSTN telephone which is powered by the telephone line.

For users who do not have POE equipment, the traditional power adaptor should be used. If the device is connected to both POE switch and external power adapter, Y501/Y501-Y/Y501W/Y501W-Y will get power supply from POE switch in priority, and change to external power adapter once the POE power supply fails.

Please use the power adapter supplied by Fanvil and the POE switch met the specifications to ensure the device work properly.

5.2 Appendix

5.2.1 Common Command Modes

Table 1- Common command mode

Action behavior	Description
Standby report IP	In standby mode, long press the speed dial button(Finish key) for 3 seconds, there will be a toot sound will 5 seconds, please press the speed dial button(Finish key) once within 5 seconds, the toot sound will stop automatically reporting IP
Switch network mode	In the standby mode, long-press the speed dial button(Finish key) for 3 seconds and the beep will last for 5 seconds. Within 5 seconds, press the speed dial button(Finish key) three times quickly to switch to the network mode. If there is no IP at present, switch to the default static IP

	<p>(192.168.1.128).</p> <p>Then switch to DHCP mode when it is the default static IP (192.168.1.128)</p> <p>When DHCP gets to IP, then do not switch and report the IP directly.</p> <p>Report the IP after the successful switch.</p>

5.2.2 LED Status

Table 2 - LED Status

Type	Indicator status	Indicator status
LED Light	Red slow flash	Registration failed, Network anomaly
	Green slow flash	Calling
	Solid on green	Nurse Presence is activated
	Solid on red	Device is in clean mode

6 User Guide

6.1 Y501&Y501W Panel Overview

Picture 1 - Y501&Y501W Panel

Table 3 - Y501&Y501W Panel introduction

Number	Name	Description
1	Speaker	Play sound
2	Speed Dial key	For speed dial, multicast, intercom, IP broadcast and other functions Corresponding web Function Key >> Function Key Settings , "Dsskey1"
3	Emergency key	The emergency button can be used for functions such as speed dialing, emergency contacts, and more Corresponding web Function Key >> Function Key Settings , "Dsskey2"
4	Hang up key	Hang up the call Corresponding web Function Key >> Function Key Settings , "Dsskey3"

6.2 Y501-Y&Y501W-Y Panel Overview

picture 2 - Y501-Y&Y501W-Y Panel

Table 4 - Y501-Y&Y501W-Y Panel introduction

Number	Name	Description
1	Speaker	Play sound
2	Finish key	Represents the completed status button. The patient calls the health care provider on demand, and when the health care provider arrives to complete the work, such as changing medication, press the finish button to indicate that the health care work has been completed. Corresponding web Function Key >> Function Key Settings ,”Dsskey1”
3	Nursing key	Represents the status button in the process. When the patient calls the health care provider on demand, the health care provider arrives and presses the arrival button, indicating that the health care provider has arrived and started the health care work.

		Corresponding web Function Key >> Function Key Settings ,”Dsskey2”
4	Help key	If a healthcare worker finds himself unable to handle a patient's condition and needs help from others, press the help button and the device will call other healthcare workers who are free at the moment to come and help. Corresponding web Function Key >> Function Key Settings ,”Dsskey3”
5	Call key	For speed dial, multicast, intercom, IP broadcast and other functions Corresponding web Function Key >> Function Key Settings ,”Dsskey4”
6	Change medicine key	When the patient needs a medication change, he or she can press the change button of the handle to call the change nurse to come and change the medication. Corresponding web Function Key >> Function Key Settings ,”Dsskey5”
7	Have an infusion key	When the patient needs to change the medication, you can press the change drip button on the handle to call the nurse to come and change the infusion drip. Corresponding web Function Key >> Function Key Settings ,”Dsskey6”

6.3 Interface Description

On the back of the device, there is a row of terminal blocks for connecting the power supply, indoor switches, etc., the connection is as follows:

Picture 3 - Interface

Table 5 - Interface

SN	Description
①	Ethernet interface: standard RJ45 interface, 10/100M adaptive, it is recommended to use five or five types of network cable
②	Power interface: 12V/1A input
③	A set of RS485
④	A set of short-circuit output interfaces
⑤	A set of short-circuit input interfaces

6.4 Installation Instructions

6.4.1 Installation

- 1) Attach the installation dimension drawing to the position to be installed, open a groove of the same size according to the size, use the electric drill to punch the hole in the 2 screw holes marked, and use the hammer to drive the screw into the drilled hole (or directly into 86 boxes);
- 2) Remove the cover;
- 3) Place the bottom case into the previously opened groove and screw in the two screws with a screwdriver to secure the bottom case to the wall; Put the handle fixing base in the installation

position, and screw in two screws with a screwdriver to fix the handle base on the wall.

4) Test whether there is electricity by doing the following:

Long press Call key (the key with the serial number 2 in the [6.1 panel Overview](#)) for 3 seconds(after power-on for 30 seconds), and when the speaker beeps rapidly, press DSS key again quickly, the beeps stop ,the intercom will report the IP address by itself. If the work is normal, continue with the next steps.

5) Cover the cover removed in step 2;

6.4.2 Device IP Address

Method one:

1. Go to the official website of Fanvil [Support] >> [Download Center] >>[Tools]>> [IPScanner] module,click and download the DeviceManager,

2.Open the IP scan tool, the tool supports LAN scan and cross network segment scan.

3. For LAN scanning:

.Click the desktop icon, run the DeviceManager tool

4. Cross-segment scan: Fill in the cross-segment setting in the upper right corner of the page in the format of: IP address/mask. That is: IP address/N.

Index	MAC	IP Address	Model	Version	Version Status	description

Method two:

Y501&Y501W

After the device boots up (about 30s), in standby mode, press and hold the speed dial key (the key with the serial number 2 in the [6.1 panel Overview](#)) for 3s, release the key immediately after the speaker beeps, and then press the speed dial key quickly within 5s (the same key as the above long press), and the device starts to broadcast IP.

Y501-Y&Y501W-Y

After the device boots up (about 30s), in standby mode, press and hold the finish key (the key with the serial number 2 in the [6.2 panel Overview](#)) for 3s, release the key immediately after the speaker beeps, and then press the finish key quickly within 5s (the same key as the above long press), and the device starts to broadcast IP.

Method three:

Y501&Y501W

After the device boots up (about 30s), in standby mode, press and hold the speed dial key (the key with serial number 2 in [6.1 panel Overview](#)) for 3 seconds, release the key immediately after the speaker beeps, and then press the speed dial key three times quickly within 5s (the same key as the above long press) to complete the operation. After successfully switching to dynamic IP, the system automatically announces the IP address by voice.

Y501-Y&Y501W-Y

After the device boots up (about 30s), in standby mode, press and hold the finish key (the key with serial number 2 in [6.2 panel Overview](#)) for 3 seconds, release the key immediately after the speaker beeps, and then press the finish key three times quickly within 5s (the same key as the above long press) to complete the operation. After successfully switching to dynamic IP, the system automatically announces the IP address by voice.

Table 6 - Configuration instructions

Default configuration					
DHCP mode		Default enable		Static IP	192.168.1.128
Voice	read	IP	Long press the speed dial buttonf (Finish Key) for 3 seconds, press the speed dial button one times within 5 seconds	Server port	80
address					

6.5 WEB Configuration

When the device and your computer are successfully connected to the network, enter the IP address of the device on the browser as <http://xxx.xxx.xxx.xxx/> and you can see the login interface of the web page management.

A screenshot of a web login interface. It features a light blue background with a white rounded rectangle containing the login fields. The fields are labeled 'User:', 'Password:', and 'Language:'. The 'User:' and 'Password:' fields are text input boxes. The 'Language:' field is a dropdown menu currently showing 'English'. Below the dropdown is a 'Logon' button. There is also a small square checkbox to the right of the language dropdown.

Picture 4 - WEB Login

The username and password should be correct to log in to the web page. **The default username and password are "admin"**. For the specific details of the operation of the web page, please refer to [9 Web Configurations](#)

6.6 SIP Configurations

At least one SIP line should be configured properly to enable the telephony service. The line configuration is like a virtualized SIM card. Just like a SIM card on a mobile phone, it stores the service provider and the account information used for registration and authentication. When the device is applied with the configuration, it will register the device to the service provider with the server's address and user's authentication as stored in the configurations.

The SIP line configuration should be set via the WEB configuration page by entering the correct information such as phone number, authentication name/password, SIP server address, server port, etc. which are provided by the SIP server administrator.

- WEB interface: After login into the phone page, enter **[Line]** >> **[SIP]** and select **SIP1/SIP2** for configuration, click apply to complete registration after configuration, as shown below:

Picture 5 - SIP Line Configuration

6.7 Volume Setting

Set the volume (if the speaker or microphone is not connected, you can skip it)

[Settings] >> [Media Settings] >> [Media Settings], as shown below, click **[Apply]**.

Speakerphone Volume: Set the speaker output volume.

Handfree Mic Gain: microphone volume level.

Picture 6- Volume Set

7 Basic Function

7.1 Making Calls

After setting the function key to Hot key and setting the number, press the function key to immediately call out the set number, as shown below:

Function Key Settings >>

Key	Type	Name	Value			Subtype	Line	Media
DSS Key 1	Key Event ▼			+	-	Handfree ▼	AUTO ▼	DEFAULT ▼
DSS Key 2	None ▼			+	-	None ▼	AUTO ▼	DEFAULT ▼
DSS Key 3	None ▼			+	-	None ▼	AUTO ▼	DEFAULT ▼
DSS Key 4	None ▼			+	-	None ▼	AUTO ▼	DEFAULT ▼
DSS Key 5	None ▼			+	-	None ▼	AUTO ▼	DEFAULT ▼
DSS Key 6	None ▼			+	-	None ▼	AUTO ▼	DEFAULT ▼
DSS Key 7	None ▼			+	-	None ▼	AUTO ▼	DEFAULT ▼

Programmable Key Settings ⓘ >>

Advanced Settings >>

Picture 7- Function Setting

See detailed configuration instructions [9.30 Function Key](#)

7.2 Answering Calls

After setting up the automatic answer and setting up the automatic answer time, it will hear the ringing bell within the set time and automatically answer the call after timeout. Cancel automatic answering. When a call comes in, you will hear the ringing bell and will not answer the phone over time.

7.3 End of the Call

When there is a call, you can press the speed dial key or hang up the key to hang up the call, the speed dial key is set to end the call by default. See detailed configuration instructions [9.30 Function Key](#).

7.4 Auto Answer

The user can turn off the auto-answer function (enabled by default) on the device webpage, and the ring tone will be heard after the shutdown, and the auto-answer will not time out.

Web interface:

Enter [Line] >> [SIP], Enable auto answer and set auto answer time and click submit.

Picture 8 - WEB line enable auto answer

SIP P2P auto answering:

Enter [Line]>>[Basic settings],Enable auto answer and set auto answer time and click submit.

Picture 9- Enable auto answer for IP calls

- Auto Answer Timeout (0~120)

The range can be set to 0~120s, and the call will be answered automatically when the timeout

is set.

7.5 Call Waiting

- Enable call waiting: new calls can be accepted during a call.
- Disable call waiting: new calls will be automatically rejected and a busy signal will be prompted
- Enable call waiting tone: when you receive a new call on the line, the device will beep.

Users can enable/disable call waiting in the device interface and the web interface.

- Web interface: enter **[Settings]** >> **[Features]**, enable/disable call waiting, enable/disable call waiting tone.

The screenshot displays the 'Basic Settings >>' page in the Fanvil web interface. The left sidebar contains a navigation menu with the following items: System, Network, Line, settings (selected), Call List, Function Key, Security, Device Log, and Security Settings. The main content area is divided into two columns of settings:

- Enable Call Waiting:** ☒ ?
- Enable Auto on Hook:** ☒ ?
- Auto HangUp Tone:** ☒ ?
- Enable Silent Mode:** ☐ ?
- Ban Outgoing:** ☐ ?
- Default Ans Mode:** Video ?
- Enable Restricted Incoming List:** ☒ ?

- Block XML When Call:** Enable ?
- Call Number Filter:**
- Limit Talking Duration:** ☐
- Call Timeout:** 120 (1~3600)second(s) ?
- Http API UserName:** admin ?
- Auto HangUp Delay:** 3 (0~30)second(s) ?
- Disable Mute for Ring:** ☐ ?
- Default Dial Mode:** Video ?
- Enable Country Code:** ☐
- Area Code:**
- P2P IP Prefix:**
- Push XML Server:** ?
- SIP Notify:** Enable ?
- Auto Resume Current:** ☒ ?
- Talking Duration:** 120 (20~600)second(s)
- Enable Http Api Auth:** ☒ ?
- Http Api PassWord:** admin ?

Picture 10 - Call Waiting

Picture 11 - Call Waiting tone

7.6 Call Waiting

8 Advance Function

8.1 Intercom

The equipment can answer intercom calls automatically.

Picture 12 - WEB Intercom

Table 7- Intercom

Parameters	Description
Enable Intercom	When the intercom system is enabled, the device will accept the SIP header call-info of the Call request Command automatic call
Enable Intercom Barge	If the option is enabled, device will answer the intercom call automatically while it is in a normal call, and it will reject new intercom call if there is already one intercome call
Enable Intercom Tone	Enable mute during intercom mode
Enable Intercom Mute	Enable mute mode during the intercom call

8.2 MCAST

This feature allows user to make some kind of broadcast call to people who are in multicast group. User can configure a multicast DSS Key on the phone, which allows user to send a Real Time Transport Protocol (RTP) stream to the pre-configured multicast address without involving

SIP signaling. You can also configure the phone to receive an RTP stream from pre-configured multicast listening address without involving SIP signaling. You can specify up to 10 multicast listening addresses.

Picture 13 - MCAST

Table 8- MCAST

Parameters	Description
Priority	Defines the priority in the current call, with 1 being the highest priority and 10 being the lowest.
Intercom Priority	The priority of the intercom call, 1 is the highest priority, 10 is the lowest, and the high priority can be inserted into the low priority
Enable Page Priority	Regardless of which of the two multicast groups is called in first, the device will receive the higher priority multicast first.
Enable Prio Chan	Once enabled, the same port and channel can only be connected. Channel 24 is the priority channel, higher than 1-23; A channel of 0 indicates that no channel is used
Enable Emer Chan	When enabled, channel 25 has the highest priority
Mcast Listening Renew Time	Set the wait time to renew to the multicast

Multicast:

- Go to web page of [Function Key] >> [Function Key], select the type to multicast, set the multicast address, and select the codec.
- Click Apply.
- Set up the name, host and port of the receiving multicast on the web page of [Settings] >> [MCAST].
- Press the DSSKey of Multicast Key which you set.

- Receive end will receive multicast call and play multicast automatically.

MCAST Dynamic:

Description: send multicast configuration information through SIP notify signaling. After receiving the message, the device configures it to the system for multicast monitoring or cancels multicast monitoring in the system.

8.3 Hotspot

SIP hotspot is a simple utility. Its configuration is simple, which can realize the function of group vibration and expand the quantity of sip account. Take one device A as the SIP hotspot and the other devices (B, C) as the SIP hotspot client. When someone calls device A, devices A, B, and C will ring, and if any of them answer, the other devices will stop ringing and not be able to answer at the same time. When A B or C device is called out, it is called out with A SIP number registered with device A.

Table 9 - SIP Hotspot

Parameters	Description
Enable Hotspot	Enable or disable hotspot
Mode	This device can only be used as a client
Monitor Type	The monitoring type can be broadcast or multicast. If you want to restrict broadcast packets in the network, you can choose multicast. The type of monitoring on the server side and the client side must be the same, for example, when the device on the client side is selected for multicast, the device on the SIP hotspot server side must also be set for multicast
Monitor Address	The multicast address used by the client and server when the monitoring type is multicast. If broadcasting is used, this address does not need to be configured, and the system will communicate by default using the broadcast address of the device's wan port IP
Local Port	It shows the Hotspot listening port. Enter the custom hotspot communication port. The ports of the server and client need to be consistent
Name	Fill in the name of the SIP hotspot. This configuration is used to identify different hotspots on the network to avoid connection conflicts
Line Settings	Sets whether to enable the SIP hotspot function on the corresponding SIP line

Client Settings :

As a SIP hotspot client, there is no need to set up a SIP account, which is automatically

acquired and configured when the device is enabled. Just change the mode to "client" and the other options are set in the same way as the hotspot.

NOTE

Description:
Hotspot feature settings. Hot client as the extension of a hot server end to connect to the hot server side. When the server side has an incoming call, the client will ring at the same time, and can replace server to answer. The server and the client can use the hot cornet to call each other.

Picture 14 - SIP hotspot

The device is the hotspot server, and the default extension is 0. The device ACTS as a client, and the extension number is increased from 1 (the extension number can be viewed through the [SIP hotspot] page of the webpage).

Calling internal extension:

- The hotspot server and client can dial each other through the extension number before
- Extension 1 dials extension 0

9 Web Configurations

9.1 Web Page Authentication

Users can log into the device's web page to manage user device information and operate the device. Users must provide the correct user name and password to log in. If the password is entered incorrectly three times, it will be locked and can be entered again after 5 minutes.

The details are as follows:

- If an IP is logged in more than the specified number of times with a different user name, it will be locked
- If a user name logs in more than a specified number of times on a different IP, it is also locked

9.2 System >> Information

User can get the system information of the device in this page including,

- Model
- Hardware Version
- Software Version
- Uptime
- Last uptime
- MEMInfo
- System Time

And summarization of network status,

- Network Mode
- MAC Address
- IP
- Subnet Mask
- Default Gateway

Besides, summarization of SIP account status,

- SIP User
- SIP account status (Registered / Unapplied / Trying / Timeout)

9.3 System >> Account

Picture 15- WEB Account

On this page the user can change the password for the login page.

Users with administrator rights can also add or delete users, manage users, and set permissions and passwords for new users

9.4 System >> Configurations

On this page, users with administrator privileges can view, export, or import the phone configuration, or restore the phone to factory Settings.

Picture 16 - System Setting

■ Export Configurations

Right click to select target save as, that is, to download the device's configuration file, suffix ".txt". (note: profile export requires administrator privileges)

■ Import Configurations

Import the configuration file of Settings. The device will restart automatically after successful import, and the configuration will take effect after restart

■ Clear Configurations

Select the module in the configuration file to clear.

SIP: account configuration.

AUTOPROVISION: automatically upgrades the configuration

TR069:TR069 related configuration

MMI: MMI module, including authentication user information, web access protocol, etc.

DSS Key: DSS Key configuration

■ Clear Tables

Select the local data table to be cleared, all selected by default.

■ Reset Phone

The phone data will be cleared, including configuration and database tables.

9.5 System >> Upgrade

Picture 17- Upgrade

Upgrade the software version of the device, and upgrade to the new version through the webpage. After the upgrade, the device will automatically restart and update to the new version.

Click select, select the version and then click upgrade.

Upgrade the ringtone,support wav and MP3 format.

Firmware Upgrade:

- Web page: Login phone web page, go to **[System]** >> **[Upgrade]**.

Picture 18 - Web page firmware upgrade

Table 10- Firmware upgrade

Parameter	Description
Upgrade server	
Enable Auto Upgrade	Enable automatic upgrade, If there is a new version txt and new software firmware on the server, phone will show a prompt upgrade message after Update Interval.
Upgrade Server Address1	Set available upgrade server address.
Upgrade Server Address2	Set available upgrade server address.
Update Interval	Set Update Interval.
Firmware Information	
Current Software Version	It will show Current Software Version.
Server Firmware Version	It will show Server Firmware Version.
[Upgrade] button	If there is a new version txt and new software firmware on the server, the page will display version information and upgrade button will become available; Click [Upgrade] button to upgrade the new firmware.
New version description	When there is a corresponding TXT file and version on

information	the server side, the TXT and version information will be displayed under the new version description information.
-------------	---

- The file requested from the server is a TXT file called vendor_model_hw10.txt. It will be followed by the hardware version number, it will be written as hw10 if no difference on hardware. All Spaces in the filename are replaced by underline.
- The URL requested by the phone is HTTP:// server address/vendor_Model_hw10.txt: The new version and the requested file should be placed in the download directory of the HTTP server, as shown in the figure:
- TXT file format must be UTF-8
- vendor_model_hw10.TXT The file format is as follows:
Version=1.6.3 #Firmware
Firmware=xxx/xxx.z #URL , Relative paths are supported and absolute paths are possible, distinguished by the presence of protocol headers.
BuildTime=2018.09.11 20:00
Info=TXT|XML

Xxxxx
Xxxxx
Xxxxx
Xxxxx
- After the interval of update cycle arrives, if the server has available files and versions, the phone will prompt as shown below. Click [view] to check the version information and upgrade.

9.6 System >> Auto Provision

Webpage: Login and go to **[System]** >> **[Auto provision]**.

Picture 19- Auto provision settings

Fanvil devices support SIP PnP, DHCP Options, Static provision, TR069. If all of the 4 methods are enabled, the priority from high to low as below:

PNP>DHCP>TR069> Static Provisioning

Transferring protocol: FTP 、 TFTP 、 HTTP 、 HTTPS

Table 11- Auto Provision

Auto provision	
Parameters	Description
Basic settings	
Current Configuration Version	Shows the current config file's version. If the version of the downloaded configuration file is same with this one, the configuration file will not be applied. If the device confirm the configuration by the Digest method, once the configuration of server is modified or the device's configurations are different from server's, the device will download and apply the configurations.
General Configuration Version	Shows the common config file's version. If the version of the downloaded configuration file is same with this one, the configuration file will not be applied. If the device confirm the configuration by the Digest method, once the configuration of server is modified or the device's configurations are different from server's, the device will download and apply the configurations.
CPE Serial Number	Serial number of the equipment
Authentication Name	Username for configuration server. Used for FTP/HTTP/HTTPS.

	If this is blank the phone will use anonymous
Authentication Password	Password for configuration server. Used for FTP/HTTP/HTTPS.
Configuration File Encryption Key	Encryption key for the configuration file
General Configuration File Encryption Key	Encryption key for common configuration file
Download Fail Check Times	The default value is 5. If the download configuration fails, it will be downloaded 5 times.
Enable Get Digest From Server	When the feature is enable, if the configuration of server is changed, phone will download and update.
Download CommonConfig enabled	Set whether to enable downloading generic profiles
Enable Server Digest	computer digest by server before downloading
Provision Config Priority	Provision Config Priority
DHCP Option	
Option Value	The equipment supports configuration from Option 43, Option 66, or a Custom DHCP Option. It may also be disabled.
Custom Option Value	Custom option number. Must be from 128 to 254.
Enable DHCP Option 120	Set the SIP server address through DHCP Option 120.
DHCPv6 Option	
Option Value	DHCP Option type for Auto Provisioning.
Custom Option Value	When Option Value is selected as Custom Option, you can customize the value of the Option, which ranges from 128~254
SIP Plug and Play (PnP)	
Enable SIP PnP	Whether enable PnP or not. If PnP is enable, phone will send a SIP SUBSCRIBE message with broadcast method. Any server can support the feature will respond and send a Notify with URL to phone. Phone could get the configuration file with the URL.
Server Address	Broadcast address. As default, it is 224.0.0.0.
Server Port	PnP port
Transport Protocol	PnP protocol, TCP or UDP.
Update Interval	PnP message interval.

Static Provisioning Server	
Server Address	Set FTP/TFTP/HTTP server IP address for auto update. The address can be an IP address or Domain name with subdirectory.
Configuration File Name	The configuration file name. If it is empty, phone will request the common file and device file which is named as its MAC address. The file name could be a common name, \$mac.cfg, \$input.cfg. The file format supports CFG/TXT/XML.
Protocol Type	Transferring protocol type, supports FTP 、 TFTP 、 HTTP and HTTPS
Update Interval	Configuration file update interval time. As default it is 1, means phone will check the update every 1 hour.
Update Mode	Provision Mode. 1. Disabled. 2. Update after reboot. 3. Update after interval.
Autoprovision Now	
TR069	
Enable TR069	Enable TR069 after selection
Enable TR069 Warning Tone	If TR069 is enabled, there will be a prompt tone when connecting.
ACS Server Type	There are 2 options Serve type, common and CTC.
ACS Server URL	ACS server address
ACS User	ACS server username (up to is 59 character)
ACS Password	ACS server password (up to is 59 character)
STUN server address	Enter the STUN address
Enable the STUN	Enable the STUN
TLS Version	TLS Version
INFORM Sending Period	TR069 message cycle. Valid Value:1~9999 seconds.

9.7 System >> FDMS

Picture 20 - FDMS

Table 12- FDMS

FDMS info Settings	
Community Number	Name of equipment installation community
Building Number	Name of equipment installation building
Room Number	Equipment installation room name

9.8 System >> Tools

This page gives the user the tools to solve the problem.

Picture 21 - Tools

Syslog: When enabled, set the Syslog software address, and log information of the device will be recorded in the Syslog software during operation. If there is any problem, log information can be analyzed by Fanvil technical support.

9.9 System>>Reboot

9.10 Network >> Basic

This page allows users to configure network connection types and parameters.

Note: WiFi is only supported on the Y501W & Y501W-Y

Network Mode

Network Mode:

IPv4 Only

IPv4 Network Status

ETH IP:	172.16.7.132
Subnet mask:	255.255.255.0
Default gateway:	172.16.7.1
MAC:	0c:38:3e:3c:28:e9

IPv4 Settings

Static IP

DHCP

PPPoE

DHCP Hostname:

Y501-Y

Enable Vendor Identifier:

Disabled

Vendor Identifier:

Fanvil Y501-Y

DNS Server Configured by:

DHCP

Primary DNS Server:

223.5.5.5

Secondary DNS Server :

114.114.114.114

DNS Domain:

Apply

Picture 22 - Network Basic Setting

Table 13 - Network Basic Setting

Field Name	Explanation
Net Global	Set the network global mode to Ethernet or WiFi
Net Type	IPv4, IPv6, IPv4 and IPv6 three modes
IPv4 Network Status	
IP	The current IP address of the equipment
Subnet mask	The current Subnet Mask
Default gateway	The current Gateway IP address
MAC	The MAC address of the equipment
MAC Time stamp	Display the time when the device gets the MAC address
Settings	
Select the appropriate network mode. The equipment supports three network modes:	
Static IP	Network parameters must be entered manually and will not change. All parameters are provided by the ISP.
DHCP	Network parameters are provided automatically by a DHCP server.
PPPoE	Account and Password must be input manually. These are provided by your ISP.
If Static IP is chosen, the screen below will appear. Enter values provided by the ISP.	
DHCP Hostname	Set the name that is displayed when DHCP scanning
DNS Server Configured by	Select the Configured mode of the DNS Server.
Primary DNS Server	Enter the server address of the Primary DNS.
Secondary DNS Server	Enter the server address of the Secondary DNS.
attention : 1) After setting the parameters, click 【Apply】 to take effect. 2)If you change the IP address, the webpage will no longer responds, please enter the new IP address in web browser to access the device. 3) If the system USES DHCP to obtain IP when device boots up, and the network address of the DHCP Server is the same as the network address of the system LAN,	

then after the system obtains the DHCP IP, it will add 1 to the last bit of the network address of LAN and modify the IP address segment of the DHCP Server of LAN. If the DHCP access is reconnected to the WAN after the system is started, and the network address assigned by the DHCP server is the same as that of the LAN, then the WAN will not be able to obtain IP access to the network

9.11 Network >> WiFi

On this page, you can turn on WiFi, add WiFi information, and view the list of wireless networks

9.12 Network >> Service Port

This page provides the settings of webpage login protocol, protocol port and RTP port.

Picture 23- Service port setting interface

Table 14- Server Port

Parameter	Description
Web server type	Restart after setting takes effect. Optional web login as HTTP/HTTPS
Web login timeout	The default is 15 minutes, the timeout will automatically log out of the login page, and you need to log in again
Web page automatic login	No need to enter the user name and password after the timeout, it will automatically log in to the web page.
HTTP port	The default is 80, if you want system security, you can set other port Such as: 8080, web page login: HTTP://ip:8080
HTTPS port	The default is 443, same as HTTP port usage
RTP port start range	The value range is 1025-65535. The value of rtp port starts from the initial value set. Each time a call is made, the value of the voice and video ports is increased by 2
RTP port quantity	Number of calls

9.13 Network>>VPN

Picture 24- Network VPN

Virtual Private Network (VPN) is a technology to allow device to create a tunneling connection to a server and becomes part of the server's network. The network transmission of the device may be routed through the VPN server.

For some users, especially enterprise users, a VPN connection might be required to be established before activate a line registration. The device supports two VPN modes, Layer 2 Transportation Protocol (L2TP) and OpenVPN.

The VPN connection must be configured and started (or stopped) from the device web portal.

■ L2TP

NOTICE! The device only supports non-encrypted basic authentication and non-encrypted data tunneling. For users who need data encryption, please use OpenVPN instead.

To establish a L2TP connection, users should log in to the device web portal, open page [Network] -> [VPN]. In VPN Mode, check the "Enable VPN" option and select "L2TP", then fill in the L2TP server address, Authentication Username, and Authentication Password in the L2TP section. Press "Apply" then the device will try to connect to the L2TP server.

When the VPN connection established, the VPN IP Address should be displayed in the VPN

status. There may be some delay of the connection establishment. User may need to refresh the page to update the status.

Once the VPN is configured, the device will try to connect to the VPN automatically when the device boots up every time until user disable it. Sometimes, if the VPN connection does not established immediately, user may try to reboot the device and check if VPN connection established after reboot.

■ OpenVPN

To establish an OpenVPN connection, user should get the following authentication and configuration files from the OpenVPN hosting provider and name them as the following,

OpenVPN Configuration file:	client.ovpn
CA Root Certification:	ca.crt
Client Certification:	client.crt
Client Key:	client.key

User then upload these files to the device in the web page [Network] -> [VPN], Section OpenVPN Files. Then user should check “Enable VPN” and select “OpenVPN” in VPN Mode and click “Apply” to enable OpenVPN connection.

Same as L2TP connection, the connection will be established every time when system rebooted until user disable it manually.

Picture 26- SIP

Table 16 - SIP

Parameters	Description
Register Settings	
Line Status	Display the current line status at page loading. To get the up to date line status, user has to refresh the page manually.
Server Address	Enter the IP or FQDN address of the SIP server
Server Port	Enter the SIP server port, default is 5060
Authentication User	Enter the authentication user of the service account
Authentication Password	Enter the authentication password of the service account
Username	Enter the username of the service account.
Display Name	Enter the display name to be sent in a call request.
Activate	Whether the service of the line should be activated
Realm	Enter the SIP domain if requested by the service provider
SIP Proxy Server Address	Enter the IP or FQDN address of the SIP proxy server
Proxy Server Port	Enter the SIP proxy server port, default is 5060
Proxy User	Enter the SIP proxy user
Proxy Password	Enter the SIP proxy password
Backup Proxy Server Address	Enter the IP or FQDN address of the backup proxy server
Backup Proxy Server Port	Enter the backup proxy server port, default is 5060
Basic Settings	
Enable Auto Answering	Enable auto-answering, the incoming calls will be answered automatically after the delay time
Auto Answering Delay	Set the delay for incoming call before the system automatically answered it
Call Forward Unconditional	Enable unconditional call forward, all incoming calls will be forwarded to the number specified in the next field
Call Forward Number for Unconditional	Set the number of unconditional call forward
Call Forward on Busy	Enable call forward on busy, when the phone is busy, any incoming call will be forwarded to the number specified in the next field
Call Forward Number for Busy	Set the number of call forward on busy
Call Forward on No Answer	Enable call forward on no answer, when an incoming call is not answered within the configured delay time, the call will be forwarded to the number specified in the next field
Call Forward Number for	Set the number of call forward on no answer

No Answer	
Call Forward Delay for No Answer	Set the delay time of not answered call before being forwarded
Transfer Timeout	Set the timeout of call transfer process
Conference Type	Set the type of call conference, Local=set up call conference by the device itself, maximum supports two remote parties, Server=set up call conference by dialing to a conference room on the server
Server Conference Number	Set the conference room number when conference type is set to be Server
Subscribe For Voice Message	Enable the device to subscribe a voice message waiting notification, if enabled, the device will receive notification from the server if there is voice message waiting on the server
Voice Message Number	Set the number for retrieving voice message
Voice Message Subscribe Period	Set the interval of voice message notification subscription
Enable Hotline	Enable hotline configuration, the device will dial to the specific number immediately at audio channel opened by off-hook handset or turn on hands-free speaker or headphone
Hotline Delay	Set the delay for hotline before the system automatically dialed it
Hotline Number	Set the hotline dialing number
Dial Without Registered	Set call out by proxy without registration
Enable Missed Call Log	If enabled, the phone will save missed calls into the call history record.
DTMF Type	Set the DTMF type to be used for the line
DTMF SIP INFO Mode	Set the SIP INFO mode to send '*' and '#' or '10' and '11'
Enable DND	Enable Do-not-disturb, any incoming call to this line will be rejected automatically
Registration Expiration	Set the SIP expiration interval
Use VPN	Set the line to use VPN restrict route
Use STUN	Set the line to use STUN for NAT traversal
Codec Settings	Set the priority and availability of the codecs by adding or remove them from the list.
Advanced Settings	
Use Feature Code	When this setting is enabled, the features in this section will not be handled by the device itself but by the server instead. In order to control the enabling of the features, the device will send feature code to the server by dialing the number specified in each feature code field.
Enable DND	Set the feature code to dial to the server

Disable DND	Set the feature code to dial to the server
Enable Call Forward Unconditional	Set the feature code to dial to the server
Disable Call Forward Unconditional	Set the feature code to dial to the server
Enable Call Forward on Busy	Set the feature code to dial to the server
Disable Call Forward on Busy	Set the feature code to dial to the server
Enable Call Forward on No Answer	Set the feature code to dial to the server
Disable Call Forward on No Answer	Set the feature code to dial to the server
Enable Blocking Anonymous Call	Set the feature code to dial to the server
Disable Blocking Anonymous Call	Set the feature code to dial to the server
Call Waiting On Code	Set the feature code to dial to the server
Call Waiting Off Code	Set the feature code to dial to the server
Send Anonymous On Code	Set the feature code to dial to the server
Send Anonymous Off Code	Set the feature code to dial to the server
SIP Encryption	Enable SIP encryption such that SIP transmission will be encrypted
SIP Encryption Key	Set the pass phrase for SIP encryption
RTP Encryption	Enable RTP encryption such that RTP transmission will be encrypted
RTP Encryption Key	Set the pass phrase for RTP encryption
Enable Session Timer	Set the line to enable call ending by session timer refreshment. The call session will be ended if there is not new session timer event update received after the timeout period
Session Timeout	Set the session timer timeout period
Enable BLF List	Enable/Disable BLF List
BLF List Number	BLF List allows one BLF key to monitor the status of a group. Multiple BLF lists are supported.
Keep Alive Type	Set the line to use dummy UDP or SIP OPTION packet to keep NAT pinhole opened
Keep Alive Interval	Set the keep alive packet transmitting interval
Keep Authentication	Keep the authentication parameters from previous authentication

Blocking Anonymous Call	Reject any incoming call without presenting caller ID
User Agent	Set the user agent, the default is Model with Software Version.
Specific Server Type	Set the line to collaborate with specific server type
SIP Version	Set the SIP version
Anonymous Call Standard	Set the standard to be used for anonymous
Local Port	Set the local port
Ring Type	Set the ring tone type for the line
Enable user=phone	Sets user=phone in SIP messages.
Use Tel Call	Set use tel call
Auto TCP	Using TCP protocol to guarantee usability of transport for SIP messages above 1500 bytes
Transport Protocol	Set the line to use TCP or UDP for SIP transmission
Enable Rport	Set the line to add rport in SIP headers
Enable PRACK	Set the line to support PRACK SIP message
DNS Mode	Select DNS mode, A, SRV, NAPTR
Enable Long Contact	Allow more parameters in contact field per RFC 3840
Enable Strict Proxy	Enables the use of strict routing. When the phone receives packets from the server, it will use the source IP address, not the address in via field.
Convert URI	Convert not digit and alphabet characters to %hh hex code
Use Quote in Display Name	Whether to add quote in display name, i.e. "Fanvil" vs Fanvil
Enable GRUU	Support Globally Routable User-Agent URI (GRUU)
Sync Clock Time	Time Syncn with server
Caller ID Header	Set the Caller ID Header
Use 182 Response for Call waiting	Set the device to use 182 response code at call waiting response
Response Single Codec	If setting enabled, the device will use single codec in response to an incoming call request
BLF Server	The registered server will receive the subscription package from ordinary application of BLF phone. Please enter the BLF server, if the sever does not support subscription package, the registered server and subscription server will be separated.
Enable Feature Sync	Feature Syncn with server
Enable SCA	Enable/Disable SCA (Shared Call Appearance)
CallPark Number	Set the callPark number

Server Expire	
TLS Version	Choose TLS Version
PTime(ms)	Set whether to bring ptime field, default no.
Transaction Timer T1	Configure the duration of SIP transaction timer T1
Transaction Timer T2	Configure the duration of SIP transaction timer T2
Transaction Timer T4	Configure the duration of SIP transaction timer T4
Enable TCP Transaction Timer	Enable/Disable TCP Transaction Timer:
SIP Global Settings	
Strict Branch	Strictly match the Branch field
Enable Group	Enable SIP group server function as server backup.
Enable RFC4475	After enabling, strictly observe RFC4475.
Enable Strict UA Match	Open a strict UA match and only accept requests from the server.
Registration Failure Retry Time	The registration failure retries time, if the SIP account fails to register, the chance to register half of the retransmission time is registered until the registration is successful.
Local SIP Port	The SIP port used by the phone.

9.16 Line >> SIP Hotspot

SIP hotspot is a simple and practical function. It is simple to configure, can realize the function of group vibration, and can expand the number of SIP accounts.

See [8.3 Hotspot](#) for details.

9.17 Line >> Basic Settings

STUN -Simple Traversal of UDP through NAT -A STUN server allows a phone in a private network to know its public IP and port as well as the type of NAT being used. The equipment can then use this information to register itself to a SIP server so that it can make and receive calls while in a private network.

Picture 27- Basic Settings

The screenshot shows the "Basic Settings" tab in the Fanvil interface. On the left is a sidebar with navigation links: System, Network, Line, Intercom settings, Call List, Function Key, Security, Device Log, and Security Settings. The main area is divided into two sections: "STUN Settings" and "SIP P2P Settings".

STUN Settings:

- STUN NAT Traversal: FALSE
- Server Address: [text input]
- Server Port: 3478
- Binding Period: 50 second(s)
- SIP Waiting Time: 800 millisecond
- [Apply button]

SIP P2P Settings:

- Enable Auto Answering: ☒
- Auto Answering Delay: 0 (0~120)second(s)
- DTMF Type: RFC2833
- DTMF SIP INFO Mode: Send 10/11
- [Apply button]

NOTE: Description: Phone line basic settings, including STUN, certificate files.

Picture 28 - Line Basic Setting

Table 17- Line Basic Setting

Parameters	Description
STUN Settings	
Server Address	Set the STUN server address
Server Port	Set the STUN server port, default is 3478
Binding Period	Set the STUN binding period which can be used to keep the NAT pinhole opened.
SIP Waiting Time	Set the timeout of STUN binding before sending SIP messages
SIP P2P Settings	
Enable Auto Answering	Automatically answer incoming IP calls after the timeout period is enabled
Auto Answering Delay	Automatic answer timeout setting
DTMF Type	Set the DTMF type of the line.

DTMF SIP INFO Mode	Set SIP INFO mode to send '*' and '#' or '10' and '11'
--------------------	--

9.18 Line>>Action Plan

When calling to a phone, the bounded IP camera synchronously transmits video to the opposite phone (video support).

Log in to the device web, visit **[Line] >[Action Plan]**, and configure action plan rules.

Picture 29 - Action Plan

Table 18 - Action Plan

Parameters	Description
Action	Convert multicast: When the rule is triggered, the phone converts incoming calls or multicast to multicast and sends them to the set multicast address port.
Number	The calling number corresponding to each Action Plan; The same number expression as the dial plan is supported 123 ; 1xx ; 1. ; 1[3,5,7,8]xxxxxxxxx; 5753[5-6]xxxx X means any bit match; Indicates any bit matching; [] represents a matching rule corresponding to a certain bit;

Line	The selected rule corresponds to the matching SIP line
Direction	The behavior of the corresponding configuration rule is handled Both: trigger both incoming and outgoing calls at the same time; Outgoing call: Triggered when outbound calling; Incoming call: triggered when inbound call;
MCAST Codec	Set MCAST Codec
MCAST URL	The URL corresponding to the action plan

Tone Settings >>

Picture 30 - Feature

Table 19- Common device function Settings on the web page

Parameters	Description
Basic Settings	
Enable Call Waiting	Enable this setting to allow user to take second incoming call during an established call. Default enabled.
Enable Auto on Hook	The device will hang up and return to the idle automatically at

	hands-freemode.
Auto HangUp Delay	Specify Auto Onhook time, the device will hang up and return to the idle automatically after Auto Hand down time at hands-free mode, and play dial tone Auto Onhook time at handset mode.
Auto HangUp Tone	Enable auto hang up tone to play tone after peer hangs up
Enable Silent Mode	When enabled, the phone is muted, there is no ringing when calls, you can use the volume keys and mute key to unmute.
Disable Mute for Ring	When it is enabled, you can not mute the phone.
Ban Outgoing	If you select Ban Outgoing to enable it, and you cannot dial out any number.
Enable Restricted Incoming List	Whether enable Restricted Incoming List
Enable Restricted Outgoing List	Whether enable Restricted Outgoing List
Enable country Code	Whether enable country Code
Country Code	Country Code
Area Code	Area Code
Allow IP Call	If enabled, user can dial out with IP address
P2P IP Prefix	You can set IP call prefix, for example, I set it as "172.16.2.", then I input #160 in dialpad and press dial key, it will call 172.16.2.160 automatically
Disable AEC	Enable or disable AEC functionality
Restrict Active URI Source IP	Set the device to accept Active URI command from specific IP address.
Push XML Server	Configure the Push XML Server, when phone receives request, it will determine whether to display corresponding content on the phone which sent by the specified server or not.
Line Display Format	Line display format including SIPn/SIPn : xxx/xxx@SIPn
Block XML When Call	Blocked Push XML When Call
SIP Notify	when enabled, when the phone receives relevant notify content, the corresponding information will be displayed.
Call Number Filter	Configure a special character &, if the number is 78 & 9. The call will be filtered out&
Auto Resume Current	If the current path changes, the hold will be automatically resume
Limit Talking Duration	Automatically hang up the call after enabling the time set for the call
Talking Duration	Call duration, 20-600s
Call Timeout	The remote phone does not answer within the time, the local automatically hangs up
No Answer Auto HangUp	If the call is not answered, the call will be automatically hung up after the

Timeout	timeout
Enable Push XML Auth	To enable push xml auth, user password is required
Tone Settings	
Enable Holding Tone	When turned on, a tone plays when the call is held
Enable Call Waiting Tone	When turned on, a tone plays when call waiting
Play Dialing DTMF Tone	Play DTMF tone on the device when user pressed a phone digits at dialing, default enabled.
Play Talking DTMF Tone	Play DTMF tone on the device when user pressed a phone digits during taking, default enabled.
Enable Http Api Auth	Enable HttpApi authentication push xml
Http API UserName	Set the Http API username
Http Api PassWord	Set the HTTP API password
Description	Sets the description information displayed
Tone Settings	
Enable Holding Tone	whether enable call holding tone.
Enable Call Waiting Tone	whether enable call waiting tone.
Play Dialing DTMF Tone	Play DTMF tone on the device when user pressed a phone digit at dialing, default enabled
Play Talking DTMF Tone	Play DTMF tone on the device when user pressed a phone digits during taking, default enabled
Ring Back Tone	When the user is on a call, use a custom-set ringback tone
Busy Tone	When the user hangs up at the end of the call, use the custom-set wake tone
Intercom Settings	
Enable Intercom	When intercom is enabled, the device will accept the incoming call request with a SIP header of Alert-Info instruction to automatically answer the call after specific delay.
Enable Intercom Mute	Enable mute mode during the intercom call
Enable Intercom Tone	If the incoming call is intercom call, the phone plays the intercom tone
Enable Intercom Barge	Enable Intercom Barge by selecting it, the phone auto answers the intercom call during a call. If the current call is intercom call, the phone will reject the second intercom call
Response Code Settings	
Busy Response Code	Set the SIP response code on line busy
Reject Response Code	Set the SIP response code on call rejection

9.23 Device Settings >> Action

Table 22- Action URL

Action URL Event Settings
Set URL for the device to report its action to server. These actions are recorded and sent as xml files to the server. Sample format is http://InternalServer /FileName.xml. (Internal Server: The IP address of server; File Name: the device's xml file used to report action.)

Picture 33- Action URL

9.24 Device Settings >> Time/Date

Users can configure the device's time Settings on this page.

Picture 34 - Time/Date

Table 23- Time/Date

Time/Date	
Field Name	Explanation
Network Time Server Settings	
Time Synchronized via SNTP	Enable time-sync through SNTP protocol
Time Synchronized via DHCP	Enable time-sync through DHCP protocol
Primary Time Server	Set primary time server address
Secondary Time Server	Set secondary time server address, when primary server is not reachable, the device will try to connect to secondary time server to get time synchronization.
Time zone	Select the time zone
Resync Period	Time of re-synchronization with time server
Daylight Saving Time Settings	
Location	Select the user's time zone specific area
DST Set Type	Select automatic DST according to the preset rules of DST, or the manually input rules
Offset	The DST offset time
Month Start	The DST start month
Week Start	The DST start week
Weekday Start	The DST start weekday
Hour Start	The DST start hour
Month End	The DST end month

Week End	The DST end week
Weekday End	The DST end weekday
Hour End	The DST end hour
Manual Time Settings	
To set the time manually, you need to disable the SNTP service first, and you need to fill in and submit each item of year, month, day, hour and minute in the figure above to make the manual settings successful.	
System time: Display system time and its source (SIP automatic get >SNTP automatic get >manual manual setting)	

9.25 Device Settings>>Time Plan

The user can set the time point and time period for the device to perform a certain action.

Picture 35- Time Plan

Table 24- Time Plan

Parameters	Description
Time Plan Settings	
Enable Time Plan List	Turn on the time management list, and then perform the set action at the set time period
Enable Time Plan Pause	Turn on the pause list, and the device will not perform the set action until the time of setting pause
Time Plan	

Name	Enter a custom name
Type	Timed reboot, Timed upgrade, Timed echo test, Timed play audio ,Timed config
Audio Path	Support on-premises Local: Select the locally uploaded audio file
Play mode	When the type is selected as Play Audio, it supports setting to loop playback or play it once
Play Type	Local: The device plays audio Multicast: The device sends audio over multicast Local & Multicast: While the device plays locally, it also sends audio through multicast
Multicast address	Sets the multicast address when playing audio
Code	The encoding used when multicast audio
Repetition period	No repetition: Execute once within the set time range Daily: Perform this operation in the same time range every day Weekly: Do this within the time range of the day of the week Monthly: Perform this operation within the time range of the day of each month
Effective time	Set the execution period
Time Plan List	
Time Plan Pause	
Name	Pause list name
Start time	Set start time
Stop time	Set stop time
Time Plan Pause List	

9.26 Device Settings >> Tone

The user can configure the prompt tone of the device on this page.

You can select the country area or customize the area. The selected area can directly appear the default information, and the customized one can modify the key tone, callback tone and other information.

Picture 36- Tone

9.27 Device Setting>>Led

This page allows users to configure the light status and color of the device.

picture 37 - Led

Status light: User can customize the LED indication and color of the device in each state.

9.28 Device Settings >> Basic Settings

Basic Settings

In a healthcare facility, like a nurse homes, the typical structure of location is: Building >> Floor >> Ward >> Room >> Bed or Toilet. A ward is zone which has many rooms and a nurse station which is responsible for these rooms. The Zone NO, Room NO, Bed NO are designed to identify the location in

the nurse call system.

Zone NO.(1-100):	<input type="text" value="1"/>	
Room NO.(1-9998):	<input type="text" value="9999"/>	Default room number must be changed.
Bed NO.(1-20):	<input type="text" value="1"/>	

Zone NO. (1-100): Default Zone NO. is 1. Range from 1 to 100. It's used to identify a unique ID for a ward. Generally, there's one ward on one floor.

Room NO. (1-9998): Default Room NO is 9999. Range from 1 to 9998. It's used to identify a room in a healthcare facility.

Bed NO. (1-20): Default Bed NO is 1. Range from 1 to 20.

These parameters "Zone NO", "Room NO", "Bed NO" are used to identify a location, and it's used for corridor light control as well. A room is considered to be a basic unit in the nurse call system, and only one corridor light for a room, while there might be multiple bed in the same room. So the location is used for identify a unique location. The bed station in the same room, can control the corridor light via network when they have same zone number and room number, but has different bed number. Because of this, the default room number must be changed to allow the corridor light control work.

Corridor Light

Corridor Light

Corridor Light connected to:
☒ Remote Device
☐ RS485

Option "Corridor Light connected to:" :

Default: Remote Device. It means this device will use the remote corridor light which connected to another Y501 intercom, it will send the control command via network to the remote device. The location must be same accept for the "Bed NO".

Option "RS485", means the corridor light is connected to the RS485 interface of this device, the connection diagram as below image:

When “RS485” is selected, user will see below options:

Key Type:	Colors:	Frequency:	Priority:
Nurse Call Normal:	Red	Slow Flash	4
Nurse Call Emergency:	Red	Fast Flash	2
Toilet Emergency Call:	Red	Fast Flash	2
Presence:	Green	Solid On	None
Staff Assist Call:	Yellow	Slow Flash	3
Staff Emergency Call:	Red	Fast Flash	2
Code Blue Call:	Blue	Fast Flash	1
Cancel:	None	None	None

Apply

There are 4 column here:

Key type: the 1st column lists the key type supported, when a key is pressed, a key event will be generated

Colors: the 2nd column is the colors to the key events. There are 5 options available for the colors:

Red/Green/Yellow/Blue, the key event will control the corridor light on in Red/Green/Yellow/Blue colors. **None**, will not change anything for this event. But for Cancel event, is special, it will clear call and light status. It's not recommended to change Cancel line.

Frequency:

Solid ON, the light will be solid on before the status is changed.

Solid Off, the light will be solid off before the status is changed.

Slow Flash, the light will be flash slowly before the status is changed.

Fast Flash, the light will be flash fast before the status is changed.

None, the light will not be controlled. Special for Cancel event as well. Not recommended to

change Cancel line.

Priority: priority level from 1 to 9, and None for Cancel is special.

The priority of the key event will be used in the priority of call as well, it will affect the incoming call priority list on nurse station A320i.

2nd, the priority will affect the corridor light control. If more than one key event occurs in the same room, the higher priority key event will take affect. For example, if a “nurse call normal” occurs first, the light will be flash **slowly** in red by default. And then a higher priority event “toilet emergency call” occurs, the light will be changed into flash **fast** in red, because the “toilet emergency call” has higher priority than “nurse call normal” by default. If 2 events with same priority occurs, the newer one will take place.

Corridor Light Control

Corridor Light Control

Corridor Light Mode: Priority then Routine Rotation 

Light Off After Call Answered: Disabled

Turn Off Presence by Other Call Type: Disabled

Apply

Corridor Light Mode

Priority First: In Priority Mode, the system always displays the highest-priority active call. Lower-priority calls do not override or replace higher-priority calls.

Priority then Routine Rotation (First disable [9.31 Function key >> Function Key](#)): Emergency calls are handled with higher priority, while normal calls are displayed in a sequential order. When calls are triggered or canceled, corridor light behavior remains normal and consistent. Normal calls are displayed in sequence. Emergency calls always take precedence over normal calls.

Light Off After Call Answered

Disabled, by default, this option is disabled.

Light off by answer, the corridor light will be turned off after call is answered.

Light off by hangup, the corridor light will be turned off after call is ended.

Turn Off Presence by Other Call Type

Disable, by default, this option is disabled.

Enable, After the option is enabled. The new call on the panel will be able to turn off the “Presence” light. This option will only apply to call types: Nurse Call Emergency, Toilet Emergency Call, Staff Assist Call, Staff Emergency Call, Code Blue Call. Nurse call Normal or Service Call will not be applied.

Nurse Call Log

Nurse Call Log

Enable Nurse Call Log: ☐

Log Server Address:

Apply

Enable Nurse Call Log

Disable by default, this option is disabled.

Log Server Address

Server Address is empty by default.

After enable nurse call log and set log server address at the same time, the deployment will be valid. Once enabled, the system will automatically generate, manage, and transmit nurse call logs based on the care task lifecycle. When a nurse call is triggered, the system creates a new Nurse Call Log. A corresponding care task is started. When the Presence button is activated, the system records the staff arrival time. The presence status indicates that a nurse or staff member is on site. When the Cancel button is activated, the system records the staff departure time. The active Care Task is closed.

9.29 Call list >> Call List

■ Restricted Incoming Calls

It same as blacklist.By adding a number into the blacklist, user will no longer receive phone call from that number and it will be rejected automatically by the device until user delete it from the blacklist.

User can add specific number to be blocked, or a prefix where any numbers matched the prefix will all be blocked.

■ Restrict Outgoing Call

You can set the rule to restrict some numbers from dialing out,until you remove the number from the table.

9.30 Call list >> Web Dial

	mode, see 5.2.1 Common Command Mode for details
Advanced Settings	
Dial Mode Select	<p><Main/Secondary>: If the first number is not answered within the set time, the second number will be automatically switched.</p> <p><Time Period>: The system time is automatically detected during the call. If it is daytime, the first number is called, otherwise the second number is called.</p> <p><Group Call>: It can simultaneously call multiple targets (e.g., nurse station console A320i and wireless handheld). Once any target answers the call, all other targets stop ringing</p>
Call Switched Time	Set number 1 to call number 2 time, default 16 seconds
Day Start Time	The start time of the day when the <Day/Night> mode is defined. Default "06:00"
Day End Time	The end time of the day when the <Day/Night> mode is defined. Default "18:00"
Display Name Setting Type	After enabled, use function key name in display name.
Emergency Call Audio File	After upload the audio files, select any emergency call audio files based on situation.
Emergency Call DTMF response	Enables emergency call handling via predefined telephone keypad inputs.
Inter-call Timeout	Set the inter-call timeout seconds
DTMF Code To Reset inter-call and Corridor light	During a medical call alert, the status of the inter-call and corridor light can be set to reset via DTMF signaling.
Allow Staff Action Before Presence	Allows staff to perform predefined actions on a call or event using keyboard before the system registers staff presence.

➤ Memory Key

Enter the phone number in the input box. When you press the function key, the device will call out the set phone number. This button can also be used to set the IP address, press the function key to make an IP direct call.

Function Key Settings >>

Key	Type	Name	Value			Subtype	Line	Media
DSS Key 1	Memory Key			+	-	Speed Dial	SIP1	DEFAULT
DSS Key 2	None			+	-	None	AUTO	DEFAULT
DSS Key 3	None			+	-	None	AUTO	DEFAULT

Picture 44 - Advanced Setting

➤ **NCS Event**

For NCS event, the function on the handset usually used by aged people/patient in bed, while the buttons on panel, usually used by caregiver or nurse. Add portable Wi-Fi phone to the solution, the phone supports receiving NCS call type. The button (wired or wireless) 7 in below image will be used in toilet for toilet emergency call.

The function key type “NCS Event” was designed for healthcare scenario. It has below subtype:

Nurse Call Normal: This is the normal call to the nurse station, when patient needs help, she/he will press the red button on handset. To make a “Nurse Call Normal” call, press the button, to cancel it, press the same button again. Or press “Presence” or “Cancel” button. If a lower priority call is in progress, the lower priority call will be cancel and the new higher priority call will be initiated.

Nurse Call Emergency: This is the emergency call to the nurse station, it will require nurse to go to the room to check immediately. It’s usually set on the wireless pendant which held on patient’s hand, when they for example fall down, they will press the pendant to make an “Nurse Call Emergency” call. To make a “Nurse Call Emergency” call, press the button, press the same button again to cancel it. Or Press “Presence” or “Cancel” button to cancel the call. If a lower priority call is in progress, the lower priority call will be cancel and the new higher priority call will be initiated.

Toilet Emergency Call: This is the call type which used in WC emergency button. Patient can pull the cord or press the button to make a “Toilet Emergency Call” call, to cancel it, press the same button again. Or press the “presence” button or “Cancel button” to cancel the call. If a lower priority call is in progress, the lower priority call will be cancel and the new higher priority call will be initiated.

Staff Assist Call: A “Staff Assist Call” is made when the nurse needs assistance from other colleague. This is a staff use only function, only when “presence” is activated, user can make a “Staff Assist Call” call, otherwise, it will be ignored. When “presence” is activated, the LED on the panel will show solid Green, see above image, 9 is the LED.

Staff Emergency Call: A “Staff Emergency Call” is a call made by caregiver or nurse, to trigger an alert for assistance. When this call type received, an immediate response is required. This is a staff use only function. Only when the “presence” is activated, user can make a “staff Emergency Call”, press the same button again will cancel the call. Other button “presence” and “cancel” can cancel the call as well. If a lower priority call is in progress, the lower priority call will be cancel and the new higher priority call will be initiated.

Code Blue Call: A “Code Blue Call” is a call made by caregiver or nurse, when the emergency or critical situation is crucial for patient safety and care. Require immediate response. This is a staff use only function, only when “presence” is activated, user can trigger a “Code Blue Call”, to cancel it, press the same button again, or press “Presence” or “Cancel” button. If a lower priority call is in progress, the lower priority call will be cancel and the new higher priority call will be initiated.

Presence: When the nurse or caregiver enters the room, she/he will press the “presence” button to check-in. Before leaving the room, he/she needs to press “presence” button again or “cancel” button to check-out. The presence button will cancel the current call.

Cancel: The “Cancel” button will cancel the call and clear the corridor light status. Before nurse or caregiver leaving the room, they must press the cancel button to clear call and corridor light. Long press the “Cancel” button will enter the cleaning mode. In cleaning mode, the LED on panel will stay on red for 15 seconds, in this period, any button’s event will be ignored.

Service Call: The service call is a call for information, not required nurse to come into the room, like ask some information, ask for a coffee etc.

➤ **Configuration steps to call from Y501 series to Wi-Fi phone**

- Log in to the Y501 series intercom web interface → Function key, and ensure the key’s call type is set to NCS Event. Note that the subtype varies depending on the key
- In the **Value** column of the function key, enter the number of the Wi-Fi phone, as shown in the example below:

Key	Type	Name	Value	Subtype	Line	Media
DSS Key 1	NCS Event		2	Presence	AUTO	DEFAULT
DSS Key 2	NCS Event		2	Nurse Call Norm	AUTO	DEFAULT
DSS Key 3	NCS Event		2	Code Blue Call	AUTO	DEFAULT
DSS Key 4	NCS Event		0	Toilet Emergency	AUTO	DEFAULT

Apply

- **Operation Steps:**
 - Press the assigned button on the Y501 series intercom; a call will be placed to the Wi-Fi phone.
 - Upon receiving the call, the Wi-Fi phone will play the corresponding notification tone, and a prompt message will appear on the screen:

- Press “OK” to view the detailed message, the location information will be displayed and the text color will appear in red, yellow, or blue, depending to the call types

- Press “Accept” to acknowledge the alert, or press “more” --> “call back” to call the intercom; If the nurse is currently occupied, press “Reject” to dismiss the alert.
- The nurse then goes to the patient’s or resident’s room and press the “Presence” button on the Y501 intercom.
- Once the “Presence” button is pressed, the alert message will automatically move to history on the Wi-Fi phone

➤ **Programmable Key Settings for NCS Event:**

Programmable Key Settings ? >>						
Key	Desktop	Dialer	Ringing	Alerting	Talking	Desktop Long Pressed
Key1	Dsskey1	Dsskey1	Answer	End	Dsskey1	Main Menu
Key2	Dsskey2	Dsskey2	Answer	End	Dsskey2	Invalid
Key3	Dsskey3	Dsskey3	Answer	End	Dsskey3	Invalid
Key4	Dsskey4	Dsskey4	Answer	End	Dsskey4	Invalid
Key5	Dsskey5	Dsskey5	Answer	End	Dsskey5	Invalid
Key6	Dsskey6	Dsskey6	Answer	End	Dsskey6	Invalid
Key7	Dsskey7	Dsskey7	Answer	End	Dsskey7	Invalid

Desktop: the device is in idle state. Press the button will trigger the function in DSS when “desktop” is set to dss; will do nothing when it’s set to “invalid”

Dialer: in the dialer state, the device will play a dial tone. Press the button will trigger the function in DSS when it’s set to Dsskey\$n, will do nothing when it’s set to “invalid”

Ringing: When the device receive an incoming call, and it’s ringing.

Answer: Press the button will answer the call

End: Press the button will end the call

Invalid: Press the button will do nothing

Alerting: When the device is making an outgoing call, and hearing the ring back tone, it’s in alerting state. The 2 options are not available when the DSS Key Type is “NCS Event”. When it’s in alerting state, press the button with NCS Event, will follow these principle:

If the current call is a lower priority call than the pressed button event, the current call will be

ended, and the new pressed event call will be made

If the current call is higher priority than the pressed button event, the button event will be ignored

If the current call has the same priority with the pressed button event, the button event will be ignored as well.

Since “Presence” and “Cancel” are special purpose, so they will end the current call by default. Presence state will not be changed when “Presence” button is pressed while ringing or alerting.

Talking: when the device is in talking state

DSSn: the principle for this option is:

If the current call has lower priority than the pressed button event, the current call will be ended, and the new pressed event call will be made

If the current call has higher priority than the pressed button event, the new button event will be ignored.

If the current call has the same priority with the pressed button event, the new button event will be ignored as well.

For “Presence” and “Cancel” event, their function is fixed.

End: the current call will be ended when the button is pressed.

Invalid: the new button event will be ignored.

Desktop Long Pressed: Long press the speed dial key to enter the command line mode, see [5.2.1 Common Command Mode](#) for details

➤ Advanced Settings

Advanced Settings >>

Dial Mode Select	Main-Secondary	NCS Event Call Mode	Default
Call Switched Time	5 (5~50)second(s)

Inter-call Timeout	60 (60~300)second(s)	DTMF Code To Reset inter-call and Corridor light	0
Allow Staff Action Before Presence:	Disabled		

Apply

When DSS key is set to NCS Event, and the option “NCS Call Standard” is set to default, below options will not be available:

Dial Mode Select

Call Switched Time

First Number Start Time

First Number End Time

Use Function Key Name in Display Name

Group Call: The Y501 series intercom can simultaneously call multiple targets (e.g., nurse station

console A320i and handheld Wi-Fi phone). Once any target answers the call, all other targets stop ringing

Configuration steps

- Log in to the Y501 series intercom web interface → Function key, and ensure the key's call type is set to NCS Event. Note: If multiple numbers are called simultaneously, the Nurse Presence field must include the same numbers
- In the Value column of the function key, click + and enter all numbers to be called simultaneously

Function Key Settings >>

Key	Type	Name	Value	Subtype	Line	Media
DSS Key 1	NCS Event	test123	2	Presence	AUTO	DEFAULT
			0			
DSS Key 2	NCS Event		2	Nurse Call Norm	AUTO	DEFAULT
			0			
DSS Key 3	NCS Event		2	Code Blue Call	AUTO	DEFAULT
			0			
DSS Key 4	NCS Event		0	Toilet Emergency	AUTO	DEFAULT
			2			

Apply

- Under **Function Key** → **Advanced Settings**, find Dial Mode Selection, select Group Call, and click **Apply** to save

Advanced Settings >>

[Dial Mode Select](#)

Group Call

Call Switched Time: 16 (5~50)second(s)

First Number Start Time: 06:00 (00:00~23:59)

First Number End Time: 18:00 (00:00~23:59)

Use Function Key Name in Display Name: ☒

Emergency Call Audio File: None

Inter-call Timeout: 60 (60~300)second(s)

Allow Staff Action Before Presence: Enable

NCS Event Call Mode: Default

Emergency Call DTMF response

DTMF Code To Reset inter-call and Corridor light: 0

Apply

Sequential Call: When a key is pressed, the system calls the first number; if it is not answered within the timeout, the call to the first number is canceled, and the system moves on to call the next number, continuing up to eight numbers in sequence.

Configuration steps

- Log in to the Y501 series intercom web interface → **Function key**, and ensure the key's call type is set to NCS Event. Note: If multiple numbers are called simultaneously, the **Nurse Presence** field must include the same numbers
- In the **Value** column of the function key, click + and enter all numbers to be called simultaneously

Function Key Settings >>

Use Function Key Name in Display Name: ☒

Emergency Call Audio File None

Inter-call Timeout 60 (60~300)second(s) Emergency Call DTMF response 0

Allow Staff Action Before Presence: Enable

Apply

NCS Event Call Mode

Default: In default Mode, NCS Event will send an SIP MESSAGE to destination before establish a real SIP call.

SIP: This is the standard SIP call mode, not able to identify the call type and priority. For the caller information, it can work with the option “use function key name in display name”.

Use Function Key Name in Display Name

It’s disabled by default. Enable this option will replace the “Display Name” in the “from” header of INVITE message. This “Display Name” will be displayed on the screen of callee.

Note: This usually only works in P2P mode, the SIP server might change the “From” header.

DTMF Code To Reset inter-call and Corridor light

It’s set to 0 by default. Defines the DTMF key sequence that allows staff to remotely reset an active call and clear the associated corridor light using a telephone or SIP device.

Allow Staff Action Before Presence

Allows staff to perform predefined actions on a call or event using hotkeys before the system registers staff presence at the location.

picture 45 - Wireless Key

Table 30 - Wireless Key Settings

Parameters	Description
Index	The serial number of the added wireless button
Name	You can set specific names for different wireless buttons
Addr id	Unique identification id of the wireless button, the addrid of each wireless button is unique (ID is displayed in hexadecimal, only numbers and letters are supported, special characters are not supported)

Type	Select the function type of the wireless button, the functions include: Dial number, Ring, NCS Event
Subtype	When call is selected for Type, the subtype displays the Line selection; When select ring, the subtype displays the Ringtone selection item. When Type is NCS Event, the NCS event list will be displayed on the subtype list.
Value	When select Dial number, the subtype display of line selection;
Pairing Status	Displays the pairing status, including pairing, pairing, and disconnecting
Operation	To bind or disconnect the button

■ pairing method:

Manual input addr ID method

- Login to the IP address of the device and enter the **[Function key] >> [Wireless key]** module to add a new wireless key operation
- When adding a new key, the user needs to fill in the new name, addr id (a unique identifier to distinguish different keys), type, subtype, and value (optional). After filling in, click Bind or Submit, then the device will be paired with the device with this addr id. If the status shows paired, it means the new button is successfully added.

Auto-scan addr ID method

- Log in the IP address of the device and go to **[Function key] >> [Wireless key]**
- Add a new key: Click Bind in the key list, and the device will enter the pairing state. Open the wireless key and press it. The pairing state of the device web page changes to paired and the addr id of the key is displayed. Indicates successful pairing.

If the pairing fails after pressing the button once, you can try to press the wireless button several times to avoid the pairing failure due to information loss

- After successful pairing, the user can fill in the name, type, subtype and value (optional) of the selected new button, and click Submit to save the settings after completion.

9.33 Security >> Web Filter

Users can set up to allow only a certain network segment IP to access the device

Web Filter Table		
Start IP Address	End IP Address	Option
172.16.80.6	172.16.80.69	<div>Modify</div> <div>Delete</div>

Picture 46- WEB filter

Add and delete the allowed IP network segments; configure the start IP address in the start IP, configure the end IP address in the end IP, and then click [Add] to add successfully. You can set a large network segment or add it into several network segments. When deleting, select the starting IP of the network segment to be deleted in the list, and then click [Delete] to take effect. Enable web filtering: configure to enable/disable web access filtering; click the [Submit] button to take effect

Note: If the device you access to the device is on the same network segment as the device, do not configure the web filtering network segment to be outside your own network segment, otherwise you will not be able to log in to the web page.

9.34 Security >> Trust Certificates

You can upload and delete uploaded trust certificates.

Picture 47 - Trust Certificates

9.35 Security >> Device Certificates

Select the default certificate or the custom certificate as the device certificate.

You can upload and delete uploaded certificates.

Picture 48- Device Certificates

9.36 Security >> Firewall

Picture 49 - Firewall

Through this page, you can set whether to enable the input and output firewalls, and at the same time, you can set the input and output rules of the firewall. Use these settings to prevent malicious network access, or restrict internal users from accessing some resources of the external network, and improve safety.

The firewall rule setting is a simple firewall module. This function supports two kinds of rules: input rules and output rules. Each rule will be assigned a serial number, and a maximum of 10 each rule can be set.

Taking into account the complexity of firewall settings, the following will illustrate with an example:

Table 31- Web Firewall

Parameter	Description
Enable Input Rules	whether enable Input Rules
Enable Output Rules	Whether enable Output Rules
input/output	Select the current rule as an input or output rule
Deny/permit	Choose the current rule is deny or allowed;
protocol	There are four types of protocols: TCP, UDP, ICMP, IP。
Port range	Port range
Src Address	The source address can be the host address, network address, or

	all addresses 0.0.0.0; it can also be a network address similar to *.*.*.0, such as 192.168.1.0.
Dst Mask	The destination address can be a specific IP address or all addresses 0.0.0.0; it can also be a network address similar to *.*.*.0, such as 192.168.1.0.
Src Port Range	It is the source address mask. When it is configured as 255.255.255.255, it means it is a specific host. When it is set as a subnet mask of type 255.255.255.0, it means that the filter is a network segment;
Dst Port Range	It is the destination address mask. When it is configured as 255.255.255.255, it means it is a specific host. When it is set as a subnet mask of 255.255.255.0 type, it means that a network segment is filtered;

After setting, click [Add], a new item will be added to the firewall output rules, as shown in the figure below:

Index	Deny/Permit	Protocol	Src Address	Src Mask	Src Port Range	Dst Address	Dst Mask	Dst Port Range
-------	-------------	----------	-------------	----------	----------------	-------------	----------	----------------

Picture 50- Firewall rules list

Then select and click the button [Submit].

In this way, when the device runs: ping 192.168.1.118, it will not be able to send data packets to 192.168.1.118 because of the prohibition of the output rule. But ping other IPs in the 192.168.1.0 network segment can still receive the response packets from the destination host normally.

Rule Delete Option

Input/Output:

Index To Be Deleted:

Picture 51- Delete firewall rules

Select the list you want to delete and click [Delete] to delete the selected list.

9.37 Device Log

You can crawl the device log, when you encounter unusual problems, please send the device log to the technical staff for positioning problem. For more detail [10.5 get device log](#).

9.38 Security Settings

Enable Tamper: after enable, when the device is removed by force, the alarm information will be sent to the server and the alarm ring will be played.

Picture 52 - Security Settings

Table 32- Security Settings

Security Settings	
Parameters	Description
Basic Settings	
Ringtone Duration	Set the ringtone duration, default value is 5 seconds.
Input & Tamper Server Address	Set remote server address. The device will send message to the server when the alarm is triggered. The message format is : Alarm_Info:Description=A10;SIP User=;Mac=0c:38:3e:3a:06:65;IP=; port=Input .
Input settings	
Input Detect	Enable or disable Input Detect
Triggered by	When choosing the low level trigger (closed trigger), detect the input port (low level) closed trigger.
	When choosing the high level trigger (disconnect trigger), detect the input port (high level) disconnected trigger.

Input Duration	Set input duration
Triggered Action	<p>Send SMS: Set the alert message send to server if selected.</p> <p>Dss Key: The device will perform corresponding Dss Key configurations if any key is selected, by default the value is none.</p> <p>Triggered Ringtone: Select triggered ring tone.</p>
Output Settings	
Output Response	Enable or disable Output Response
Triggered by DTMF Ring tone	Select the DTMF trigger ring tone.
Triggered by URI Ringtone	Select the URI trigger ring tone.
Triggered By SMS Ringtone	Select the SMS trigger ring tone.
Triggered By Dsskey Ringtone	Select the Dsskey trigger ring tone.
Standard Status	When choosing the low level trigger (NO: normally open), when meet the trigger condition, trigger the NO port disconnected.
	When choosing the high level trigger (NC: normally close), when meet the trigger condition, trigger the NC port close.
Output Duration	Set the output change duration time, the default is 5 seconds.
Trigger by DTMF	Enable or disable trigger by DTMF. The device will check the received DTMF sent by remote device, if it matches the DTMF trigger code, the device will trigger corresponding output port.
DTMF Trigger Code	Input the DTMF trigger code, default value is 1234.
DTMF Reset Code	Input the DTMF reset code, default value is 4321.
Reset By	<p>Reset the output port mode by duration or state.</p> <p>By duration: Reset the output port status when output duration occurs.</p> <p>By state: Reset the output port status when device's call state changes.</p>
Trigger by URI	<p>Enable or disable trigger by URI.</p> <p>User can send commands from remote device or server to A10 series device, if the command is correct, then device will trigger corresponding output port.</p>
Trigger Message	Input trigger message for trigger by URI mode.
Rest Message	Input reset message for trigger by URI mode.
Trigger by SMS	<p>Enable or disable trigger by SMS.</p> <p>User can send ALERT command to A10 series device, if the command is correct, then device will trigger corresponding output port.</p>

Trigger SMS	Input trigger message for trigger by SMS mode.
Reset SMS	Input reset message for trigger by SMS mode.
Trigger by Input	Select the input port, when the input port meets the trigger condition, the output port will be triggered (The Port level time change, By < Output Duration > control)
Trigger By Call state	Select call state to trigger the output port, options are: Talking: When the device's talking status changes, trigger the output port. Ringing: When the device's ringing status changes, trigger the output port. Calling: When the device's calling status changes, trigger the output port.
Trigger By DssKey	Enable or disable trigger by dsskey. If any of the dsskey is selected, when the dsskey application performs, the output port will be triggered.

10 Trouble Shooting

When the device is not working properly, users can try the following methods to restore the device to normal operation or collect relevant information to send a problem report to the Fanvil technical support mailbox.

10.1 Get Device System Information

Users can obtain information through the **[System] >> [Information]** option on the device webpage. The following information will be provided:

Device information (model, software and hardware version) and Internet Information etc.

10.2 Reboot Device

User can restart the device through the webpage, click **[System] >> [Reboot Phone]** and click **[Reboot]** button, or directly unplug the power to restart the device.

When the device has problems and user can't access the web page, you can disassemble the surface shell and press the "**RESET**" button. The device will restart and the configuration will not change.

10.3 Device Factory Reset

Restoring the factory settings will delete all configurations, database and configuration files on the device and the device will be restored to factory default state.

To restore the factory settings, please go to **[System] >> [Configuration] >> [Reset Phone]** page, and click **[Reset]** button, the device will return to the factory default state.

10.4 Network Packets Capture

In order to obtain the data packet of the device, the user needs to log in to the webpage of the device, open the webpage **[System] >> [Tools]**, and click the **[Start]** option in the "Network Packets Capture". A message will pop up asking the user to save the captured file. At this time, the user can perform related operations, such as starting/deactivating the line or making a call, and clicking the **[Stop]** button on the webpage after completion. Network packets during the device are saved in a file. Users can analyze the packet or send it to the Fanvil Technical Support mailbox.

10.5 Get Device Log

Log information is helpful when encountering abnormal problems. In order to obtain the log information of the device, the user can log on to the device web page, open the web page [device log], click the "start" button, follow the steps of the problem until the problem appears, and then click the "end" button, "save" to the local for analysis or send the log to the technician to locate the problem.

10.6 Common Trouble Cases

Table 25 - Trouble Cases

Trouble Case	Solution
Device could not boot up	<ol style="list-style-type: none"> 1. The device is powered by external power supply via power adapter or POE switch. Please use standard power adapter provided or POE switch met with the specification requirements and check if device is well connected to power source. 2. If the device enters "POST mode" (Solid orange), the device system is damaged. Please contact your location technical support to help you restore your equipment system.
Device could not register to a service provider	<ol style="list-style-type: none"> 1. Please check if the device is connected to the network. 2. If the network connection is good, please check your line configuration again. If all configurations are correct, contact your service provider for support, or follow the instructions in "10.4 Network Data Capture" to obtain a registered network packet and send it to the Fanvil Support Email to help analyze the issue.
